

Most orientation errors are self-revealing: Meek closure fails and the analyst finds out

Contradiction rate rises fast: 0.627 at d=1 → 0.876 at d=3 → 1.000 by d=16

Base wrongness barely moves it at d = 1

Both panels: flip arm only, pooled sample counts from survival_curves.csv (never merged with the tiered arm's d axis — see module docstring for a report-table mislabelling this figure corrects). Right panel reproduces report_fragility_and_pareto.md §2.7 exactly (0.653 / 0.647 / 0.563).
