

Cross-arm intensity-matched comparison (achieved-intensity axis, both arms)

Left: xarm_intensity_histogram.csv, share of draws normalized within arm. Right: xarm_paired_test.csv, metric silent_failure_rate, bootstrap CI over networks; bins under 15 matched instances are marked, not dropped.

Take: left shows each arm's own achieved-intensity distribution; right shows the paired tiered-minus-flip difference with across-network bootstrap CIs, low-n bins marked rather than hidden.
