

AUC_frac (flip arm), the pre-registered whole-curve endpoint, by bucket

By r_val bucket: rises overall, not monotonically

By shd_truth bucket: no visible ordering

Flip arm; AUC_frac per instance; boxes = quartiles/median, n per tick; points jittered (seed 0). shd_truth = 0 also includes every coverage=1.0/base-wrongness=0 case, where it is $\equiv 0$ by construction — a separate reason it cannot rank, not merely tangling. r_val carries Conjecture 2 (hence Anti-Exchange Case B, verified not proved); the error is one-sided, so radii can only be too large. F3's per-stratum tau_b remains primary evidence for P1/P2.
